PROFESSIONAL SUMMARY

Full-stack software developer with 7 years of experience specializing in system modernization and performance optimization across oil and gas, retirement homes, and logistics. Expert in React, NestJS, and CI/CD automation with proven success leading infrastructure migrations, mobile platform transitions, and delivering scalable solutions.

CORE QUALIFICATIONS

- **React Development:** Expert in building dynamic and responsive user interfaces using React, leveraging state management techniques and lifecycle methods to optimize application performance.
- **CI/CD Process Automation:** Proficient in automating continuous integration and deployment processes using tools like GitHub Actions and GitLab Pipelines, enhancing development workflows and reducing time-to-market.
- **API Integration Techniques:** Skilled in integrating complex APIs using OAuth for secure authentication and maintaining robust communication between frontend and backend systems.
- **Database Management Systems:** Experienced in designing, implementing, and managing databases using SQL, ensuring data integrity and scalability.

AREAS OF EXPERTISE

NestJS Proficiency | React Expertise | TypeScript Programming | HTML/CSS Design | React Native Development | Expo Platform Usage | Object-Oriented Programming | CI/CD Automations

WORK HISTORY

Full-Stack Software Developer, Ignite Technology (Self-Employed) – 12/2024 – Current

- Led the comprehensive migration of retirement home scheduling application from legacy infrastructure to Ignite's modern platform, including strategic upgrades to Node.js, React, and associated packages to ensure optimal performance and security compliance.
- Orchestrated seamless database migration and object storage transitions, along with email service provider migration, significantly enhancing system reliability and operational efficiency across the retirement home management platform.
- Successfully transitioned CI/CD workflows from GitLab Pipelines to GitHub Actions, streamlining development processes and improving deployment consistency and reliability for the application.
- Spearheaded the migration from bare React Native to Expo platform, reducing build time by 50% and enabling OTA updates for rapid deployments without app store delays
- Developed an employee onboarding system that eliminated manual QuickBooks Desktop entry and hour-long batch syncs, enabling real-time data synchronization and reducing administrative overhead
- Enhanced operational workflows by implementing document upload and signing capabilities for new employees, eliminating paper-based processes and improving data accuracy

Full-Stack Software Developer, Earth Drilling (Self-Employed) – 09/2023 – 12/2024

- Revamped the purchase order system for the oil & gas web application, reducing processing time by 40% through UI/UX improvements that increased overall system interactivity for users.
- Added essential functionalities that enabled users to upload files, create invoices, and track parts within the system, significantly enhancing system versatility and user engagement.
- Implemented an Excel export feature for purchase orders, greatly facilitating more efficient data management and reporting processes, thereby streamlining workflow and productivity.
- Addressed and resolved significant issues related to job scheduling and timezones, ensuring accurate synchronization with user timesheets and substantially improving data reliability and operational consistency.
- Implemented responsive design principles, ensuring seamless performance across all devices and improving user accessibility.

Full-Stack Software Developer, Launchcode – 11/2020 - 08/2023

- Took on the role of project lead after a two-month collaboration with the Lead Developer, guiding the project to its completion and ensuring all objectives were met to the client's satisfaction.
- Drastically reduced the client's time spent on manual data recording in the field by 50%, boosting operational efficiency and data accuracy.
- Mentored a junior developer on the technical stack, project architecture, and industry best practices, thereby accelerating their professional development and enhancing the overall effectiveness of the project team.

- Led the strategic overhaul of the frontend for a critical Cisco enterprise application, dramatically improving system scalability and structural robustness.
- Increased form processing speed by 30% through advanced React optimization techniques including memoization, reducing unnecessary re-renders and improving overall application performance
- Managed the successful migration of a React Native application to the Expo platform, which streamlined the app publishing process and markedly improved the development workflow and overall code quality.

Full-Stack Software Developer, Routeique – 10/2018 - 11/2020

- Facilitated the migration of stored procedures from raw SQL to PHP, significantly reducing development conflicts within the internal supply chain and logistics software.
- Developed a robust recurring order system using PHP (Laravel), JavaScript, and MySQL, incorporating the iCal Recurrence Rule specification to enable customizable order repetition.
- Transitioned the legacy frontend from jQuery to React, employing best practices to modernize the client interface and improve user interactions.
- Optimized application performance and user experience by implementing advanced JavaScript functionalities, improving interactivity and responsiveness.

PROJECTS

Competitor Fox, 09/2022 – 08/2023

- Built a modern frontend with React and ChakraUI, leveraging advanced React patterns to create a responsive, scalable user interface.
- Integrated Stripe's API to handle payment subscriptions, implementing secure webhook endpoints for real-time payment event processing
- Established automated Docker-based deployments to DigitalOcean's container registry, developing proficiency in containerization practices while streamlining releases and improving deployment consistency

TECHNICAL PROFICIENCIES

Web Development:

- **HTML/CSS:** LESS | SCSS/SASS | CSS-in-JS
- **JavaScript/TypeScript:** JavaScript | TypeScript

Backend Technologies:

- **Node.js:** Express | Koa | NestJS
- **Databases:** PostgreSQL | MySQL | Redis
- **ORM Tools:** Prisma | Objection | Knex | TypeORM

Frontend Frameworks:

- **React:** Next.js | ChakraUI | SemanticUI | MaterialUI
- **React Native:** Expo | NativeBase

DevOps & Deployment:

- **Containerization:** Docker
- **CI/CD:** Github Actions | Gitlab Pipelines

Testing and Collaboration Tools:

- **Automated Testing:** Jest | Mocha/Chai
- **Project Management:** Jira (Standardized workflows, Automation)

EDUCATION

Object-Oriented Software Development, Southern Alberta Institute of Technology (SAIT), Calgary, Canada, 03/2018 - 10/2018

- Gained proficiency in Object-Oriented Programming (OOP) fundamentals.
- Developed a Windows Forms Application using Visual Studio and C# to gather user data and execute calculations, enhancing data handling skills.
- Designed and implemented an Android application using Java and the Spring framework, featuring a user authentication system and a dynamic homepage displaying flight information for a conceptual airline company.
